

IN THE SPECIFICATION:

The specification as amended below with replacement paragraphs shows added text with underlining and deleted text with ~~strikethrough~~.

Please REPLACE Paragraph [0042], with the following:

If the base member 10b is separated from the mounting surface 60, the contacting part 42b is exposed outside through the through hole 11b owing to the restoring force of the spring member 46b. Simultaneously, the hook 41b of the locker 40b moves downward, reaching the locking position. After, the movable stand member 30 moves downward to the locking position, the hook 41b of the locker 40b is locked into the locker accommodating part 32 of the movable stand member 30, thereby blocking movement of the movable stand member 30.
